

What did the wrong answer measure?

Answer independently. Explain what the numbers measure.

1. What is the perimeter? Choose 10 cm, 20 cm or 24 cm.

2. Someone says: "The perimeter is 24 cm because $6 \times 4 = 24$."

What does that calculation measure? Give its correct units.

Then explain how to find the perimeter.

3. Why is 10 cm tempting? Refer to the sides.

New shape: a rectangular fabric patch is 8 cm by 3 cm.

A strip goes around all four edges without overlap.

How much strip is needed? What is the area of the patch?

Explain why 24 answers one question but not the other.
